

VISTA *Spyder* 344

OVERVIEW

Included in Avcom Staging's array of vision blend technology is the Vista Spyder 344, the world's most powerful video processor achieving stunning clarity and brightness. With 3 times the pixels of any other presentation system, it enables you to mix an incredible number of sources in multiple windows, create picture-in-pictures (PiPs), define, shape and blend borders.

INTERFACE

The Spyder can move your show in directions never before possible, with almost infinite input/output configurations, animations and manipulations once only dreamt of.

- ¥ Windows based GUI
- ¥ Off-site pre-production
- ¥ Easily transportable to other venues/shows
- ¥ User friendly - from very simple command key operation to extremely complex shows

IMAGE MANIPULATION

The Spyder system is so versatile, it is able to manipulate images in any of the following ways:

- ¥ Crop
- ¥ Re-size
- ¥ Aspect ratio
- ¥ Zoom within PiPs
- ¥ Zoom each PiP Individually
- ¥ Fly PiP's in & out
- ¥ Dissolve backgrounds
- ¥ Animate backgrounds
- ¥ PiP transparency
- ¥ Create drop shadows and borders of any colour, sharpness and thickness

VERSATILITY

With capabilities not commonly found in image processors, the Vista Spyder 344 is extremely versatile and flexible. It adapts perfectly to all widescreen applications creating dynamic visual effects, and outputs to almost any device including projectors, LED and video walls, recording devices, operator monitors. The Spyder also features the ability to overlap horizontally or vertically with 10-bit edge blending and user-definable blend regions.

COMPATIBILITY

Complimenting our video switching capabilities, Avcom Staging also owns the range of Folsom products which can be seamlessly integrated with the Spyder system.

- < BlendPro
- < ScreenProPlus 1604, ScreenPro 1 & 2
- < PresentationPro 1 & 2
- < Extron 405
